

Benicians for a Safe and Healthy Community

Help us stop Valero Crude By Rail

Valero is proposing to bring in massive trains filled with crude oil to its Benicia Refinery. Every day, two heavy 4000-foot trains with 50 tanker cars each would come to Benicia, creating serious health and safety risks to residents here as well as up-rail and down-wind. **Benicians for a Safe and Healthy Community** wants YOU to know more, and to join with us in opposing this reckless project that puts corporate profits over people. The future of Benicia, and of our warming world, lies in sustainable energy, not in a short term grab for cheap, dirty and dangerously explosive oils from North Dakota and Canada. Certainly not by rail!

Plan now to attend our kickoff community meeting, **CALL TO ACTION, at the Benicia Library, Monday, March 10 at 7pm.** More information on our website, SafeBenicia.org or on Facebook.com/StopCrudeByRail.

Check out our website – learn more, get involved, voice your thoughts – SafeBenicia.org.

STOP CRUDE BY RAIL!

The Benicia Valero Refinery has proposed a “crude by rail” project for 70,000 barrels per day of oil (100 rail cars per day). Valero has admitted that this would include North Dakota Bakken crude – implicated in five explosive train derailments in recent months (July '13 – Jan. '14). The project may also bring in Canadian Tar Sands, the world's dirtiest crude oil. Because refining extreme crudes creates more pollution than conventional crude and poses devastating safety risks and increased harm to the environmental and public health, community organizations along with governmental agencies (such as the California Attorney General's Office) have expressed grave concerns over transporting crude by rail. We stand firm together for a Safe and Healthy Benicia - Stop Crude-By-Rail !

BEYOND THE BASICS ...

1. **CRUDE** – Crude oil by rail begins in a stripped and fouled landscape in America's northland, and ends in our backyard. Bakken shale crude and diluted tar-sands bitumen is the last gasp of a dying fossil fuel industry.

2. **RAIL SAFETY** – In light of recent derailments, multiple serious questions remain: who will be in charge in the event of a catastrophic explosion; who will pay for cleanup; who will monitor and enforce railroad crossings? Who will insure against catastrophic loss of the Benicia Bridge, the Clocktower, the Camel Barn, the Arsenal District, AMPORTS and small businesses in the industrial park?

3. **EMISSIONS** – Valero wants to offload crude oil from one hundred huge (80-foot) railroad tank cars every day. Each car will require connect-disconnect operations that will increase toxic vapor emissions. Unconventional crude oil would also increase corrosion risks and overall pollution. The quality of our air would be severely impacted.

4. **ECONOMICS** – There will be a small number of jobs created. But there is no long term financial gain for Benicia. The proposed 50-car “bomb trains” twice a day could lower home values and property taxes, leading to a net loss of revenue to the City of Benicia.

5. **UPRAIL AND DOWNWIND** –Valero and the City of Benicia appear NOT to be considering the huge increase in crude by rail throughout the Bay Area, nor the health and safety of communities uprail of Benicia where some schools, downtowns, and commercial centers are well within a potential blast zone if one of Valero's trains derails or spills.
